SUBJECT:

Energy Efficiency Best Practices

Introduction

At Acumetis, we're committed to reducing our environmental impact while creating a more sustainable workplace. Improving energy efficiency is an important part of that commitment, helping us conserve resources, reduce greenhouse gas emissions, and support our climate goals. This Standard Operating Procedure (SOP) outlines the everyday practices and responsibilities that help us use energy more efficiently across our offices. By working together to reduce unnecessary energy use, we can make a meaningful impact while supporting a more sustainable future.

I. Purpose

To provide a clear framework for reducing energy consumption and supporting Acumetis' commitment to sustainability through everyday energy-efficient practices.

II. Scope

This SOP applies to all Acumetis employees. Whether working remotely or in the office, employees are encouraged to follow these energy-saving practices in both personal workspaces and shared office areas.

III. Responsibilities

All employees are expected to incorporate the energy-saving practices outlined in this SOP into their daily work and help identify opportunities to reduce unnecessary energy use whenever possible.

IV. Procedures

Lighting

- Replace incandescent lights with compact fluorescent lamps (CFLs) or light-emitting diodes (LEDs) for desk lamps and overhead lighting.
- Use dimmers, motion sensors, and/or occupancy sensors to automatically turn off lighting when not in use.
- Turn off lights at the end of the workday or when leaving a room for extended periods of time.
- Rely on natural lighting when feasible.
- Use task lighting to focus light directly rather than illuminating an entire room.

Heating, Cooling, and Ventilation (HVAC)

- During warm months, close or adjust window blinds to block direct sunlight and reduce cooling needs.
- During cold months, open blinds on south-facing windows during the day to let in natural heat and close them at night to reduce heat loss.

Equipment Use

- Unplug equipment such as cell phone chargers, fans, coffeemakers, printers, and radios when not in use to avoid phantom energy consumption.
- Turn off computers and monitors at the end of the workday or during extended periods away from the desk.
- Procure energy-efficient products such as ENERGY STAR-rated equipment and energy-saving technology for office use.

V. Review and Continuous Improvement

This SOP will be reviewed annually to ensure compliance with current best practices and technological advancements. Adjustments may be made based on energy audit findings or evolving sustainability goals
